

Heating That Won't Cost the Earth 6634

For years, it has been understood that sustainable low temperature heating systems (such as heat pumps) do not work with conventional wall-mounted heating systems, but **Jaga's** Dynamic Boost Effect (DBE) technology has changed everything. When used with Jaga Low-H₂O radiators, the DBE unit circulates air over the heat exchanger, allowing low temperature systems to efficiently heat any room or space. Jaga DBE radiators are the perfect complement to any sustainable heating system, reducing the need for slow and costly underfloor heating systems, while also reducing energy bills.
